2	Prompt	2
3	Checklist	3
4	Instructor Example	3

1 Pre-assignment Reminders

- Prior to attempting this assignment, I strongly recommend that you have completed all other work through module 12, including:
 - Having watched all lectures thoroughly and taken notes (optionally with the guided notes)
 - Reading all assigned sections of the book, and completing practice examples as helpful and useful
 - Completing relevant lecture check-ins
 - Completing all quizzes, and reviewing correct answers at the end of the week
- If you are confused while completing this assignment, consider coming to my office hours or reaching out to me via email.
- All syllabus and university policies on academic integrity, plagiarism, and other forms of misconduct apply to this assignment. Please review them if you are unfamiliar. There is zero-tolerance for failure to adhere to these policies and acting un-ethically will result in automatic failure on the assignment and referral to OSCCR.

! Important

Remember, it is most important to me that you can defend the process by which you create your work and demonstrate that it represents your knowledge and abilities. Also recall that it is unacceptable to copy-paste instructions from any assignment in this class into another program or prompt.

2 Prompt

This is the last of three reflective portfolio assignments that you will complete throughout the PSY-101 semester. These are designed to help bring this PSY-101 class in line with the 'Embarking Experience' as part of CLAS Voyage at GVSU. Please see the course learning objectives in the course syllabus and [this website for more information](#). Please keep track of what you say and write as part of these reflective portfolio assignments, as I'll ask you to connect your three different portfolio assignments. For this second assignment, I'd like you to respond to this prompt:

In a mini-essay of **at least 600 words**:

First, provide the study numbers and/or technique names of **all of the SONA activities you've done**, this can be found on the SONA webpage you used to sign up with

Describe **one of the SONA activities you participated in** - what did you do/learn about? Describe the topic or the types of questions you remember being asked, or what you did during the study. Then, explain what you think the significance of what you learned and

how it applies to your life. Finally, connect the one SONA activity you chose to at least 2 concepts/theories/findings/ideas we covered in class, and provide a citation to those ideas.

Last, I want you to speak you to come up with two lingering, specific questions you have about human psychology - what are you still wondering as we conclude the class?

3 Checklist

! Important

Your grade on this assignment is based in good-faith completion - you must address each of the components below to get full points. Failure to properly source your information and answers (per the checkboxes) will result in an automatic 0 points. For the purpose of this assignment, please do not refer to outside sources not covered in this course.

- ☐ The final essay is at least 600 words
- ☐ Identify **ALL** study numbers or technique names of the SONA activities you've done this semester
- ☐ Describe, in-depth, the nature of what you learned and did during this SONA event. Try to remember relevant details, questions, and activities. It's okay if you can't remember perfectly, just try your best to describe it.
- ☐ Describe the importance to your own individual life that this activity may hold
- ☐ Connect the SONA activity to at least **two** of the concepts covered in class. You should provide a page number or slide number and module number for where this concept was covered, as a citation.
- ☐ Give **two** remaining questions you have about human psychology - be specific!

4 Instructor Example

! Important

You should NOT re-use this example/strategy for your own essay

The below example contains information like I ask you for above. It is roughly 328 words. So, the example below is roughly half of what you must complete for your own submission.

"I don't mind not knowing. It doesn't scare me." — Richard P. Feynman

Please use this to help guide you on what I am expecting for this assignment. This is a hypothetical example and does not necessarily represent “real” SONA activities done this semester.

This semester, I completed the following SONA activities: Research Study 16, Research Study 24, Research Technique Correlation and Causation, Research Technique Survey Question Wording.

In research study 24, I was asked about some new development in treatment for Alzheimer’s Disease and dementia. I think it was asking me about what I felt about the potential side effects, and if I would want a family member to take the new treatments. It also asked questions about my family history of dementia and my general sentiments and opinions about healthcare in America. I don’t quite remember everything about it, but it seemed like it was a lot to do with skepticism and trust in this new medicine.

This work is really interesting to me as my family does have a lot of dementia, both my grandparents died from it. I know some of my family is also really negative about going to the doctor and don’t want “any new shots”. So I guess that this study made me think a lot about what I believe and want to encourage my family members to do, especially as I get older.

When thinking about how this connected to what we covered in class, I first thought about when we covered the hippocampus part of the brain, in module 3 (page 12 on the guided notes). That was part of the brain that Prof. Quagliano said was really connected to our memory and I bet it’s impacted by Alzheimer’s. I also was thinking about the memory unit, in module 8, where on page 10 we covered explicit, episodic memories. I know my grandpa had a really hard time recalling stories when he got diagnosed, so I guess he didn’t have that type of long-term memory anymore.

Two questions I still have after listening to all the lectures in this class:

- 1) Why do some people act selfish most of the time?
1. Why do some people have an internal monologue and other’s don’t?
